BOARD OF NURSING PROFESSIONAL LICENSURE REQUIREMENTS (Updated October 2020)

In accordance with U.S. Department of Education Regulation 34 CFR 668.43 (a) (5) (v), the Nursing Program at WWCC has reviewed RN licensing requirements from the following states to determine whether a WWCC nursing graduate would be eligible for RN licensure in that states. Most states reviewed had published information available and it was possible to determine this with some certainty that a WWCC nursing graduate could receive a RN license. However, there were states reviewed that had verbiage to the effect of “curriculum must be substantially equivalent” to the nursing curriculum qualifications in that state and that this determination would be made by that state’s Board of Nursing upon review of the applicant’s credentials. These states are noted under the column labeled “Unable to Determine that the Curriculum Meets the State Educational Requirements for RN Licensure.”

Meets RN Licensing Requirements	Does Not Meet RN Licensing Requirements	Unable to Determine that the Curriculum Meets the State Educational Requirements for RN Licensure
